## Youth Mentor Program

Our *3D ThinkLink Initiative* uses classes in 3D design and printing to help at-risk youth develop critical thinking and problem solving skills, explore their creativity and improve their confidence. We are launching a program to extend our reach by giving our advanced students the opportunity to share what they've learned with their family, friends and neighbors. With your support, we will provide these students with the tools and skills they need to serve as Youth Mentors. A \$500 donation will buy a Tech Pack, which includes an M3D printer, laptop computer, 3D design software, and training.

Our Youth Mentor Program will empower at-risk teens to drive positive change in their communities and become role models for younger kids and even older folks. Our goal is to raise \$15,000. Here's your chance to be among the first to contribute to this important new program.

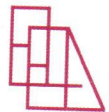

**Tech Pack: \$500**
